HOW-TO USE: Double-tap the screen to switch between centered sweet spot and movable sweet spot modes. Move the sweet spot of focus by dragging it with your finger. For best results, focus on objects 6” (15.5 cm) or further from the front of the lens.

Indicators:
AE-L - Exposure lock on or off
AF-L - Focus lock on or off

1. Attach a stainless-steel ring
   1. Clean the area around your phone’s lens with the provided alcohol wipe. Let dry.
   2. Position the ring as centered as possible over your phone’s lens without covering the microphone hole or flash.
   3. Press the ring firmly against the phone for 5 seconds or more to ensure a strong connection.

2. Download & use the App
   1. Download, install and launch the free Lensbaby app: www.lensbaby.com/app
   2. Make sure you are in “Centered Sweet Spot Mode” by double-tapping the screen. See back for app diagram.
   3. Keep the app launched while you attach the lens.

3. Attach Lens
   1. Your new Lensbaby lens attaches magnetically to the adhesive ring.
   2. Center the lens over your phone’s lens. Make sure you are in “Centered Sweet Spot Mode”.
      a. Point your phone at a light-colored monochrome surface like a wall, or the floor. If it’s off-center, the sweet spot of focus will be soft and the image will vignette (corners will fade to dark).
      b. Adjust the positioning of the lens so that the vignette is equal on all four corners. This may mean the vignette is just out of frame.
